Sabrient “Baker’s Dozen” Top Stocks for 2009

Sabrient Systems LLC

(Stocks selected in December 2008)

As we close the year and look ahead to 2009, one can hope that the worst is behind us and that corporate restructuring coupled with Federal government stimulus will be enough to give the U.S. economy—and by extension the World economy—the firm foundation it needs for recovery.

Here at Sabrient, our quant models are indicating that indeed 2009 is showing many hopeful signs. In particular, valuations are the best we have seen in a long, long time. And unless the analysts’ projections are completely off the deep end, or unless the World economy is headed for a depression, this just might be a great time to invest in those stocks that are best positioned to compete in their respective markets.

We have compiled a diverse group of stocks that appear particularly well-positioned to perform well. Let’s call them the Sabrient “Baker’s Dozen.” They are 13 stocks, plus two speculative bonus picks, that represent a cross-section of industries, score particularly well in our system, and may not all be household names that you already know:

	Name	Ticker	Sector: Industry
1	Dresser-Rand Group	NYSE: DRC	Energy: Energy Equipment & Services
2	Affiliated Managers Group	NYSE: AMG	Financials: Capital Markets
3	Delphi Financial Group	NYSE: DFG	Financials: Insurance
4	Capstead Mortgage	NYSE: CMO	Financials: Real Estate Investment Trusts
5	Cubist Pharmaceuticals	Nasdaq: CBST	Healthcare: Biotechnology
6	Atlas Air Worldwide	Nasdaq: AAWW	Industrials: Air Freight & Logistics
7	Foster Wheeler	Nasdaq: FWLT	Industrials: Construction & Engineering
8	Joy Global	Nasdaq: JOYG	Industrials: Machinery
9	Akamai Technologies	Nasdaq: AKAM	Info Tech: Internet Software & Services
10	LDK Solar	NYSE: LDK	Info Tech: Semiconductors & Equipment
11	Innophos Holdings	Nasdaq: IPHS	Materials: Chemicals
12	Compass Minerals	NYSE: CMP	Materials: Metals & Mining
13	China Mobile	NYSE: CHL	Telecom: Wireless Telecom Services
Speculative Bonus Picks:			
	Excel Maritime	NYSE: EXM	Industrials: Transportation
	T-3 Energy Services	Nasdaq: TTES	Energy: Energy Equipment & Services

These stocks were selected based on a number of quantitative criteria. In the larger table at the end of this document, we show the following scores that were used in the analysis:

VCU – “Value Change Up” score is a proprietary Sabrient rank that measures current valuation and forward outlook. It can be considered largely a GARP rank (Growth at a Reasonable Price), and also rewards conservative (and punishes aggressive) accounting practices.

SVS – Sabrient Value Score measures the relationship between a company's stock price and its intrinsic value, as indicated by earnings and balance sheet attributes, with an emphasis on earnings. Also considered are cash flow measures and fundamental valuation ratios. Note: A HIGH value score indicates that the stock may be UNDERVALUED, while a LOW value score indicates it is OVERVALUED.

SGS – Sabrient Growth Score reflects a company's historical and projected earnings growth, revenue and sales growth, projected cash flow, analyst activity, and changes in earnings estimates, each over various time periods. The HIGHER the score, the BETTER the combined performance of these key measures.

SMS – Sabrient Momentum Score measures a company's earnings AND price momentum, evenly weighted and augmented by group strength, money flow, and relative volume. Core technical factors include current price relative to periodic highs and moving averages. HIGH scores indicate STRONG momentum.

5-yr Projected Annual Growth is the consensus estimate among Wall Street analysts of the next five years earnings growth rate.

1-yr Growth Ratio is the ratio of next year's consensus projected growth rate vs. the current year's actual growth rate. We look for scores above 1.0.

Let's discuss each of the stocks, by Sector.

ENERGY:

The Energy sector continues to score well in our forward-looking sector model. Even though oil & gas prices have been hit harder than anyone could have predicted since the incredible summer peaks, oil is here to stay as the key energy source for the foreseeable future, and any increase in demand that accompanies an economic recovery will support oil prices.

Dresser-Rand Group (NYSE: DRC) is a Houston, TX-based company engaged in the design, manufacture, sale and servicing of turbo and reciprocating compressors, gas and steam turbines, gas expanders and associated control panels. The Company is a global supplier of rotating equipment solutions to the worldwide oil, gas, petrochemical and process industries. Its services and products are used for a range of applications, including oil and gas production, high-pressure injection and enhanced oil recovery, gas transmission, refinery processes, natural gas processing and petrochemical production.

Formerly Buy-rated in the Sabrient system, we moved it to Hold just before the energy meltdown in July. But it now looks particularly well-positioned to prosper in a stabilized world economy. Its SVS and SGS are excellent, the 5-year Projected Annual Growth rate is quite high, and the 1-year Growth Ratio is solidly above 1.0. Also, it ranks near the top of our high-performing VCU strategy rank. We like DRC as a sound yet high-potential position in Energy.

FINANCIALS:

Given the poor condition of our financial system and the risk of further deterioration, you might wonder why we have three picks from the sector. However, the economy cannot recover without at least some stability in the Financials. With this in mind, we have identified three diverse stocks from this sector.

Affiliated Managers Group (NYSE: AMG) operates as an asset management company providing investment management services to mutual funds, institutional clients, and high net worth individuals in the United States. It provides advisory or subadvisory services to mutual funds. These funds are distributed to retail and institutional clients directly and through intermediaries, including independent investment advisors, retirement plan sponsors, broker-dealers, major fund marketplaces, and bank trust departments. The company also offers investment products in various investment styles in the institutional distribution channel, including small, small/mid, mid, and large capitalization value and growth equity, and emerging markets. In addition, it offers quantitative, alternative, and fixed income products, and manages assets for foundations and endowments, defined benefit, and defined contribution plans for corporations and municipalities. The company was formed as a corporation under the laws of Delaware in 1993. Affiliated Managers Group is based in Prides Crossing, Massachusetts.

AMG recently became Buy-rated in the Sabrient system due to its high value score (SVS). In a weak Financials sector, its scores and forward projections appear to be strong.

Delphi Financial Group (NYSE: DFG) provides integrated employee benefit services. It operates in two segments, Group Employee Benefit Products and Asset Accumulation Products. The Group Employee Benefit Products segment provides group life, disability, and excess workers' compensation insurance products to small and mid-sized employers. This segment also offers travel accident, voluntary accidental death and dismemberment, and group dental insurance. It sells its products to employer-employee groups and associations in various industries through independent brokers and agents. The Asset Accumulation Products segment offers fixed annuities, primarily single premium deferred annuities, and flexible premium annuities. It sells fixed annuity products primarily to individuals through networks of independent agents. The company also provides integrated disability and absence management services, including event reporting, leave of absence management, claims and case management, and return to work management. The company was founded in 1987 and is based in Wilmington, Delaware.

DFG has been Buy-rated in the Sabrient system since early 2007. Many of the Insurance stocks are again scoring well in our system, and Delphi seems to be particularly attractive. Its value score and VCU score are quite strong, and the 1-year Growth Ratio is one of the highest on our list.

Capstead Mortgage (NYSE: CMO) operates as a real estate investment trust. The company, together with its subsidiaries, invests in real estate-related assets on a leveraged basis that primarily consisting of residential adjustable-rate mortgage securities issued and guaranteed by government-sponsored entities. Capstead Mortgage has elected to be treated as a REIT for federal income tax purposes and would not be subject to federal income tax, if it

distributes at least 90% of its REIT taxable income to its shareholders. The company was founded in 1985 and is headquartered in Dallas, Texas.

CMO recently was upgraded to Buy in the Sabrient system. It has a notably high VCU score, plus its other scores are sound across the board. It is a relatively safe bet on stabilization in the real estate market, and also offers a fat yield.

HEALTHCARE:

Although Healthcare continues to score poorly in our forward-looking sector model, we think that a compelling selection from this sleeper sector is necessary for a diversified portfolio of stocks. We looked for a sound company with a sound track record and real products.

Cubist Pharmaceuticals (Nasdaq: CBST) is a biopharmaceutical company engaged in the research, development, and commercialization of pharmaceutical products for the anti-infective market primarily in the United States. It offers Cubicin, an antibiotic from a class of anti-infectives called lipopeptides, for the treatment of complicated skin and skin structure infections, and for other blood-stream infections. The company's research and development programs include lipopeptide programs, which are concentrated on the candidates that have the gram-positive antimicrobial spectrum of daptomycin and efficacy in the lung, as well as lipopeptide candidates with efficacy against gram-negative bacteria, including multi-drug resistant pathogens; identifying multiple toxin binder products; and antimicrobial drug candidates derived from natural products. Cubist Pharmaceuticals, Inc. has research collaboration with Ilypsa, Inc. to develop a non-antibiotic, toxin binder therapy for the treatment of clostridium difficile associated diarrhea. The company was founded in 1992 and is headquartered in Lexington, Massachusetts.

Although CBST has only mediocre VCU and SVS scores, biotech firms typically score poorly on these value-oriented metrics. Nevertheless, we wanted to include a well-positioned and high-potential stock from the Healthcare sector. Cubist has been Buy-rated in the Sabrient system since summer 2007. It has good products and real income streams. Its net income increased in the recent quarter, and it has shown a pattern of positive earnings growth over recent years. Moreover, the forward-looking growth scores shown in the table are quite impressive.

INDUSTRIALS:

The Industrials sector will perform well in an economic recovery, and so we have included three diverse selections from this sector.

Atlas Air Worldwide (Nasdaq: AAWW) provides aircraft and outsourced aircraft operating solutions to the air freight industry. It operates in four segments: Aircraft, Crew, Maintenance, and Insurance (ACMI); Scheduled Service; Air Mobility Command (AMC) Charter; and Commercial Charter. The ACMI segment offers aircraft that is crewed, maintained, and insured by the company for lease. The Scheduled Service segment provides scheduled air cargo services to international freight forwarders and agents. This segment also operates airport-to-airport routes on a specific schedule. The AMC Charter segment provides full planeload charter flights to the U.S. military. The Commercial Charter segment provides planeload of capacity charter services to charter brokers, freight forwarders, direct shippers,

and airlines. The company's customers include airlines, freight forwarders, the U.S. military, and charter brokers. It operates in Asia, the Middle-East, Australia, Europe, South America, Africa, and North America. As of December 31, 2007, the company operated a fleet of 37 Boeing 747-400 freighter aircraft. Atlas Air Worldwide Holdings was founded in 1992 and is based in Purchase, New York.

AAWW recently returned to a Buy rating in the Sabrient system. It sports an eye-popping 5-year projected growth rate, along with sound VCU and SVS scores. If the world economy starts to recover, air and sea shippers will benefit, and AAWW looks particularly good.

Foster Wheeler (Nasdaq: FWLT) provides construction and engineering services to the oil and gas, oil refining, chemical/petrochemical, pharmaceutical, environmental, power generation, and power plant operation and maintenance sectors worldwide. It operates through two groups, Global Engineering and Construction Group (Global E&C Group), and Global Power Group. The Global E&C Group designs, engineers, and constructs onshore and offshore upstream oil and gas processing facilities; natural gas liquefaction facilities and receiving terminals; gas-to-liquids facilities; oil refining; and chemical, petrochemical, pharmaceutical, biotechnology, healthcare, and related infrastructure facilities. It also owns refinery residue upgrading technologies and a hydrogen production process used in oil refineries and petrochemical plants. In addition, this group also performs environmental remediation services, and engages in the development, engineering, construction, and ownership of power generation and waste-to-energy facilities in Europe. The Global Power Group designs, manufactures, and erects steam generating and auxiliary equipment for electric power generating stations and industrial facilities. It also provides a range of site services, including construction and erection services, maintenance engineering, and plant upgrading and life extension. In addition, this group provides research analysis and experimental work in fluid dynamics, heat transfer, combustion and fuel technology, materials engineering, and solids mechanics. Further, it owns and operates cogeneration, independent power production, and waste-to-energy facilities, as well as power generation facilities for the process and petrochemical industries. The company was founded in 1894 and is based in Clinton, New Jersey.

We feel strongly that an infrastructure contractor is important to have in a diversified portfolio in a recovering world economy, and several engineering & construction firms score well in our system. FWLT has sound scores across the board, and looks particularly well-positioned.

Joy Global (Nasdaq: JOYG) engages in the manufacture and servicing of mining equipment for the extraction of coal, and other minerals and ores. The company operates in two segments, Underground Mining Machinery and Surface Mining Equipment. The Underground Mining Machinery segment manufactures underground mining equipment for the extraction of coal and other bedded minerals, as well as operates service locations near mining regions worldwide. Its product line includes continuous miners; longwall shearers; powered roof supports; armored face conveyors; shuttle cars; flexible conveyor trains; complete longwall mining systems, consisting of powered roof supports, an armored face conveyor, and a longwall shearer; feeder breakers; continuous haulage systems; battery haulers; and roof bolters. The Surface Mining Equipment segment produces electric mining shovels, rotary blasthole drills, and walking draglines for open-pit mining operations. These products are used in mining copper, coal, iron ore, oil sands, silver, gold, diamonds, phosphate, and other minerals and ores. This segment also provides a range of parts and services to mines; offers

electric motor rebuilds, and other products and services to the non-mining industrial segment; and sells used electric mining shovels in other markets. In addition, it designs, manufactures, installs, and services conveyor systems for bulk material handling in mining and other industrial applications. The company was founded in 1884 and is headquartered in Milwaukee, Wisconsin.

JOYG is our final choice from among a broad range of attractive candidates. It recently became a Buy in the Sabrient system, and just reported blow-out earnings. Its value and growth scores are top-notch, and its VCU score is among the highest.

INFORMATION TECHNOLOGY:

The Info Tech sector encompasses Software, Hardware, and Semiconductors. No matter what the economy is doing, entrepreneurs will continue to push the technological boundaries. We identified two very different companies that are particularly attractive—one that focuses on Internet applications and one that is geared toward solar energy.

Akamai Technologies (Nasdaq: AKAM) provides services for accelerating the delivery of content and applications over the Internet. The company offers three business solutions: Digital Asset Solutions, Dynamic Site Solutions, and Application Performance Solutions. Digital Asset Solutions are designed to enable enterprises to execute their large file management and distribution strategies. Its solutions include Akamai Media Delivery solution that delivers media content on behalf of its customers; Electronic Software Delivery solution, which handles the distribution of software for its customers; and Akamai Stream OS, a Web-based suite of configurable tools that enables publishing of media to the Web. Dynamic Site solutions accelerate business-to-consumer Web sites that integrate collaborative content and applications into their online architecture. Application Performance solutions improve the performance of dynamic applications common on networks used by enterprises to connect with their employees, suppliers, and customers. Application Performance solutions include Web Application Accelerator, which is used by enterprise customers to run various applications; and IP Application Accelerator that is designed to address core Internet weaknesses to optimize the performance and real-time sensitivity associated with IP-enabled applications delivered over Internet-related protocols. The company's other solutions comprise EdgeControl tools that provide reporting and management capabilities; network data feeds and Website analytics, which provide customers with real time data about the performance of their content and applications over the Internet; and performance management services that help customers better understand their Web operations with tools that measure various aspects of an application's performance. In addition, Akamai offers custom solutions to commercial and government customers. The company was founded in 1998 and is headquartered in Cambridge, Massachusetts.

AKAM has been Buy-rated in the Sabrient system since fall of 2007. With a perfect 100 in its SGS score and the highest 1-year growth ratio on the list, we had to include it.

LDK Solar (NYSE: LDK) engages in the manufacture and sale of multicrystalline solar wafers to the manufacturers of solar cells and solar modules in the People's Republic of China and internationally. It offers multicrystalline solar wafers between 180 and 220 microns in thickness. The company also provides wafer processing services to monocrystalline and multicrystalline solar cell and module manufacturers. In addition, it manufactures polysilicon

materials, which include ingots and polysilicon scraps. The company was founded in 2005 and is headquartered in Xinyu city, the People's Republic of China.

LDK is a play on growth in both solar energy and China. It has been Buy-rated in the Sabrient system since spring of 2008. LDK boasts sound VCU, SVS, and SGS scores, and an eye-popping 5-year projected growth rate.

MATERIALS:

Like the Industrials sector, Materials will perform well in an economic recovery as these products are essential to food and infrastructure development. We have included two selections from this sector.

Innophos Holdings (Nasdaq: IPHS) produces specialty phosphates primarily in the United States, Canada, and Mexico. Its products include specialty salts, which are used in food, beverage, and pharmaceutical applications; specialty acids that are used in industrial applications, such as asphalt modification and petrochemical catalysis; technical sodium tripolyphosphate, which is used in detergent applications, such as automatic dishwashing, commercial/industrial detergents, and home laundry detergents; and other products, such as phosphate fertilizers that are used as co-products of manufacturing purified phosphoric acid. Innophos Holdings also offers purified phosphoric acid to carbonated soft drink beverage producers, potable and industrial water treatment facilities, and capital goods manufacturers for pre-coating metal treatment, as well as to third-party phosphate derivative producers in the merchant market. Its purified phosphoric acid is used in the manufacture of specialty salts and specialty acids, as well as in water and metal treatment, and beverage applications. The company's customers include consumer goods manufacturers, distributors, and specialty chemical manufacturers in food, bakery, beverage, pharmaceutical, and cleaning product markets. Innophos Holdings, Inc. was incorporated in 2004 and is headquartered in Cranbury, New Jersey.

Fertilizer stocks were high-flyers in the first half of the year, and came crashing down as portfolio managers were forced to sell their winners in order to raise cash. Nevertheless, stocks in this field are well-positioned to prosper as world populations grow and seek fertilizers for crops. Innophos is a small-cap play in this space that should do very well. It consistently sits at the top of our VCU rank, and sports impressive scores across the board. It even pays a nice yield. IPHS is a Sabrient favorite for any portfolio.

Compass Minerals (NYSE: CMP) produces and markets inorganic mineral products in North America and the United Kingdom. It operates in two segments: Salt and Specialty Fertilizer. The Salt segment mines, produces, processes, and distributes sodium chloride and magnesium chloride salts, such rock, evaporated, and solar salt, as well as liquid and flake magnesium chloride for use in various applications, including highway deicing, food processing, water conditioning, industrial chemical processing, and nutritional supplements for animal stock. The Specialty Fertilizer segment produces and markets potash crop nutrients and industrial grade sulfate of potash, which are used in the production of specialty fertilizers for vegetables, fruits, tea, potatoes, nuts, tobacco, and turf grass. The company operates 10 production and packaging facilities, including a rock salt mine in Goderich, Ontario and a salt mine in Winsford, the United Kingdom. Compass Minerals International markets its products through retail channels, such as grocery stores, building supply,

hardware, mass merchants, and feed suppliers. The company was founded in 1993. It was formerly known as Salt Holdings Corporation and changed its name to Compass Minerals International, Inc. in 2003. Compass Minerals International is headquartered in Overland Park, Kansas.

Although Metals & Mining stocks don't have the strongest numbers in our system, it's hard to have a portfolio geared toward economic recovery without one. CMP is a non-metallic mining stock, and its numbers are good on a relative basis, particularly VCU and momentum scores, as well as its 1-year growth ratio.

TELECOMMUNICATIONS:

An expanding economy with technological innovation provides fertile ground for the large telecom companies. Still, many of the largest U.S. players will likely have a difficult time growing quickly. So, we look overseas for the best investment opportunities.

China Mobile (NYSE: CHL) provides mobile telecommunications and related services primarily in China and Hong Kong. It offers mobile voice services, such as local calls, domestic long distance calls, international long distance calls, intra-provincial roaming, inter-provincial roaming, and international roaming; and voice value-added services, including caller identity display, caller restrictions, call waiting, call forwarding, call holding, voice mail, conference calls, and others. The company also engages in data businesses, which include short message services, wireless application protocol, multimedia messaging services, and others, as well as color ring services that enable users to customize the answer ring tone from various selection of songs, melodies, sound effects, or voice recordings; and provides various data products, such as java applications, IVR, and PIM. In addition, it offers agricultural, campus, banking, municipal, and police information services. As of December 31, 2007, it had approximately 369 million subscribers. The company was founded in 1997. It was formerly known as China Telecom (Hong Kong) Limited and changed its name to China Mobile (Hong Kong) Limited in 2000. Later, the company changed its name to China Mobile Limited in 2006. The company is based in Central, Hong Kong. China Mobile Limited is a subsidiary of China Mobile Hong Kong (BVI) Limited.

CHL has been Buy-rated in the Sabrient system since summer of 2007. It scores especially well among Telecom stocks in momentum and 5-year projected growth. And of course, it's another good China growth play.

BONUS STOCKS:

These are the Sabrient "Baker's Dozen" Stocks for 2009. They are 13 diverse stocks that we believe will do quite well in an economic recovery—and should hold their own even if things do not turnaround quickly. Beyond these, we thought we'd toss in a couple of extra picks that our scoring system consistently likes. They are bit more speculative than the others, but look so appealing that we felt compelled to share them with you:

Excel Maritime (NYSE: EXM) is a shipping company engaged in the ownership and operation of bulk carrier vessels. The company provides seaborne transportation services for dry bulk cargoes, such as iron ore, coal and grain, steel products, fertilizers, cement, bauxite, sugar, and scrap metal. As of May 15, 2008, its fleet consisted of 47 vessels comprising 4

Capesize, 14 Kamsarmax, 21 Panamax, 2 Supramax, and 6 Handymax with a total carrying capacity of approximately 3.7 million deadweight tonnage. The company was founded in 1988 and is headquartered in Athens, Greece.

EXM sports an eye-popping yield in the somewhat risky world of international shipping. But if the world economy is to grow, such shipping companies will inevitably thrive. EXM sports amazing value and growth scores.

T-3 Energy Services (Nasdaq: TTES) designs, manufactures, repairs, and services products used in the drilling and completion of new oil and gas wells, the workover of existing wells, and the production and transportation of oil and gas worldwide. It offers pressure and flow control products, such as blow-out preventers (BOPs), BOP control systems, elastomer products, high pressure gate valves, manifolds, and control valves, as well as production, drilling, and well service chokes that are used in the drilling, completion, production, and workover of onshore and offshore, and subsea applications. The company also provides wellhead products, which include wellheads, production chokes, and production valves used in onshore oil and gas production. In addition, it offers pipeline products, which include various valves for pipeline applications, including gate, ball, control, and check valves. Further, the company provides aftermarket parts and services, such as remanufactured products and parts, repair, and field services. It markets its products through its direct sales force to drilling contractors, exploration and production companies, and pipeline companies. T-3 Energy Services, Inc. was founded in 1989 and is based in Houston, Texas.

TTES is one of several small energy services companies that score well in the Sabrient system. Oil & gas will be the energy source of choice for the foreseeable future, and TTES, with its amazing SVS and SGS scores, is especially well-positioned for steady growth.

Happy New Year...and Happy Investing. We wish you all the best of personal and investment success in 2009 and beyond!
